

Midterm Project Instruction

- Select a paper from our required reading list and thoroughly read the paper and explore the papers that cite this paper and find a research stream to write a literature review about. This literature review serves both as a foundation for your own research and an opportunity to critically analyze existing literature. This literature review must evaluate at least one article from the reading list and three additional articles.
- Submit a written report summarizing the literature review, including critiques and your proposed research questions. Additionally, you will need to give a presentation (15 minutes and 5 mins Q&As) summarizing the key points of your review, your expected contributions, and your plans of actions.
- Students can do the project by themselves, or form teams to finish this task.
- Please registrate the group information on this page: https://docs.qq.com/sheet/DVVZFVXhUeEdHc1Fa?no_promotion=1&tab=BB08J2
- Please submit a compressed file (zip file) containing your report and slides.
- Suggestion: You may use google scholar, cuhksz library and sci-hub to search articles. You can try Zotero or Endnote for literature and reference management. For report format, you can try APA7 format to let your report more appealing and professional.
 - Following these suggestions may be helpful for your literature search:
 - Use Google Scholar and the CUHKSZ Library to search for literature.
 - Use Zotero or EndNote to manage references and generate a bibliography with one click.
 - Look up the APA 7th edition style guide and use APA 7th format.
